

Name: _____ Date: _____ Period: _____

No notes. Show enough work that a wrong answer can still earn a right idea.

1. **Solve, then classify:** $4(x - 3) = 2(2x - 5) + 2$.

Work:

Circle one: one solution · no solution · infinitely many solutions

What in your last line told you which? _____

2. **Solve by factoring:** $x^2 - 3x = 10$.

Step 1 — get one side to zero:

Step 2 — factor and apply the zero product property:

Verify one of your solutions in the original equation. _____

3. **SOL-style multiple choice.** What is the solution set of $-3x + 7 > 19$?

- A. $x > -4$
- B. $x < -4$
- C. $x > 4$
- D. $x < 4$

In one sentence, what did the *wrong* answer you were most tempted by get wrong? _____
